REC_DS using C_Week 2_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Moniksha, a chess coach organizing a tournament, needs a program to manage participant IDs efficiently. The program maintains a doubly linked list of IDs and offers two functions: Append to add IDs as students register, and Print Maximum ID to identify the highest ID for administrative tasks.

This tool streamlines tournament organization, allowing Moniksha to focus on coaching her students effectively.

Input Format

The first line consists of an integer n, representing the number of participant IDs to be added.

The second line consists of n space-separated integers representing the participant IDs.

The output displays a single integer, representing the maximum participant ID.

If the list is empty, the output prints "Empty list!".

Refer to the sample output for the formatting specifications.

Sample Test Case

```
Input: 3
    163 137 155
   Output: 163
Answer
    // You are using GCC
    #include <stdio.h>
    #include <stdlib.h>
   // Node structure for the doubly linked list
   typedef struct Node {
      int data:
      struct Node* prev;
      struct Node* next:
    } Node;
   // Doubly linked list head
   Node* head = NULL;
   // Function to append a new ID to the list
    void append(int data) {
      Node* newNode = (Node*)malloc(sizeof(Node));
      newNode->data = data;
      newNode->prev = NULL;
      newNode->next = NULL;
      if (head == NULL) {
        head = newNode;
        return;
```

```
24,150,1014
                                                    241501014
    Node* temp = head;
       while (temp->next != NULL)
         temp = temp->next;
       temp->next = newNode;
       newNode->prev = temp;
     }
     // Function to find and print the maximum ID
     void print_max_id() {
       if (head == NULL) {
intf(
return;
                                                                              247501074
         printf("Empty list!\n");
       int max_id = head->data;
       Node* temp = head->next;
       while (temp != NULL) {
         if (temp->data > max_id)
           max_id = temp->data;
         temp = temp->next;
       }
       printf("%d\n", max_id);
                                                    241501074
     // Main function to handle input/output
 int main() {
       int n;
       scanf("%d", &n);
       if (n > 0) {
         for (int i = 0; i < n; i++) {
           int id;
           scanf("%d", &id);
           append(id);
                                                                              247501074
                                                    241501074
print_max_id();
```

```
// Free memory
Node* temp = head;
while (temp != NIII''
                                                                                        247501074
                                                           241501014
       while (temp != NULL) {

Node* next = temp
          free(temp);
          temp = next;
        }
        return 0;
      }
      Status: Correct
                                                                                Marks: 10/10
